		w questions							
React	Javascript	Nodejs	expressjs	mongodb	html	CSS	jquery	bootstrap	project
hat is react ,what is its uses ,what features it have	what is javascript	what is nodejs	what is express	what is mongoddb	what is html	what is css			what project you do
ff btw react and angluar	is javascript asyncronous or suncronous	why it used	what is middleware	what is aggrigation in it	what is symantic tags	what is displa			what work you have done in this project
hat is component	what is function and arrow functions	how it works	what is tempates	what is aggrigation pipleline	what introduced in html5	what is			
react server side rendering or client side rendering	what is this	what is modules	how express handle	how to connect two collections					
nat is hook , explain any 5	what is closures	what is http, https,	how express handle apis	learn about all the queries					
nat is react memo	what is hoisring , and how it worls	what is child process in it	how to make rest apis	what is odm and orm					project with MERN
nat is memo hook,callback,usereducerhook	what is temporal dead zone		what is rest api, and api						jwt ,bycrpt
nat is lifecycle in react	what is callback function ,why it uses		how many types of middlewares						otp ,number , google authentication
w to achcive lifecycle in function component	what is funciton declarion and function expression		what is authentication, and authorization						how to find user, admin
at is redux ,explain its flow of react	what is objects'		diff btw it						how to uplad images using multer , express uploading
plain the flow of react	what is settimeout and interval ,and is this the part of js'								how can you handle the load
at is contect api	what is prmoises,and why it use								how to show the users data to the admiin
nat is context hook	and what differs it from async await								how to connect react with node
nat is diff btw redux and context api	diff btw, callback , async await ,promises								how to connect node with html and css
nat prop drilling '	what is event loop in js and how it works								how to connect mongodb and mysql
w to achcive server side rendeirng in react	what is event bubbling								how to send data from backend to google sheet
nat is routing	what is fetch method ,AJAX ,								
w to impliment go back and go next route in react	what is prototype, and is every thing in js is a prototype								
nat is the need of redux	is every thing in js is a object								
nat is the need of react routing	diff btw ,var,let,const								
nat is bebel	what is excution context								
nat is webpack ,, bundles	what is DOM								
nat is the work of webpack and how many webpacks in react	what is oop								
nat is lazy loading	what is abstraction,encapsulation,inheritance ,plymorphism'								
w to optimize your react application	what is call, apply and bind and diff also								
w to do pagination , sorting ,filteration in react	what is lexical scope								
hat is build folder	diff ,map , filter ,reduce ,slice,splice ,search								
nat is package ison file	what is rest and spread operator								
nat is vite	what is fetch, how to call an api								
at is packjson.lock file	how promies works how can it handle the request and other things								
nat is node module folder	why promies used								
nat is package									
here to call the api (in redux)									
bouncing in react									
rottling in react									
concilaation in react									
ac testing tools									
nat is code splitting									
ndowing , state lifiting									
at is pure componet									
at is jsx ,and how broser understand the code written in jsx									
nat is virtual dom , how it works ,why it uses ,									
d what is real dom									
hat is higher order function									
at is flux									
w to store the token in cookies and other storage
